Subject : Spontaneous Application - Apprenticeship in Mechanical Simulation

Dear Sir or Madam,

I am currently a third-year student in Energy Mechanics at Paul Sabatier University, and I am seeking an apprenticeship in mechanical simulation to contribute to innovative projects in the field of mechanical engineering.

Throughout my studies, I have developed strong technical skills by solving complex problems using physical equations and Python programming. This approach allows me to adapt easily to different simulation environments while deepening my understanding of the theoretical foundations of applied mechanics. Next year, I plan to pursue a Master's degree in Modeling and Simulation at the University of Toulouse to strengthen my knowledge of advanced numerical simulation and apply it to real-world industrial challenges.

My experience with the Tls'e Racing association has also allowed me to deepen my expertise in simulating complex mechanical systems. As a member of the Powertrain division, I am currently developing structural analyses in Ansys for the battery housing of our electric vehicle, assessing its resistance to the weight of the cells and three-axis accelerations. When material modeling challenges arose, I turned to Abaqus, which helped refine my skills in nonlinear analysis and material behavior modeling.

I now wish to continue learning in a stimulating environment where I can apply my skills in numerical simulation, strengthen my understanding of structural mechanics, and actively contribute to the success of ambitious technical projects.

Thank you very much for considering my application.

Friedly WOLI
