Subject : Spontaneous Application - Apprenticeship in Mechanical Simulation

Dear Hiring Manager,

Third-year Energy Mechanics student at Paul Sabatier University, I am seeking an apprenticeship in mechanical simulation to contribute to Airbus world-leading aerospace programs from your Toulouse facilities.

Airbus leadership in digital simulation for aircraft design particularly inspires me. During my studies, I gained essential technical skills by solving complex problems using physical equations and Python programming. This approach gives me flexibility across simulation software while deepening my understanding of mechanical simulation fundamentals. Next year, I plan to pursue a Master's degree in Modeling and Simulation at Toulouse University to master the mathematical foundations behind advanced simulation techniques and apply my theoretical knowledge in your industry.

My involvement with Tls'e Racing enabled me to master complex system simulation. As a member of the Powertrain division, I am currently developing Ansys structural simulations for our electric vehicle battery container, ensuring it could withstand cell weight and 3-axis accelerations. As material modeling challenges arose, I move to Abaqus, significantly enhancing my expertise in advanced finite element analysis and nonlinear material behavior.

I am eager to deepen my understanding of advanced simulation techniques while sharing my strong theoretical skills and practical experience. I would be honored to contribute through an apprenticeship and look forward to discussing how I can support Airbus next-generation aircraft programs.

Friedly WOLI
